Work Order Analysis Report Requirements

The company aims to develop a comprehensive Work Order Analysis Dashboard to streamline work orders' monitoring, management, and analysis across various districts. The dataset encompasses key details about work orders, including geographic distribution, technician involvement, service types, warranty coverage, and financial metrics. This dashboard will provide actionable insights for decision-makers to optimize operations, resource allocation, and customer satisfaction.

Column details

The dataset includes the following fields:

Id	unique work order ID
District	geographic area where work will be done
LeadTech	The head technician at the work location
Service	type of work to be done - Assess, Deliver, Install, Repair, Replace
Rush	is this a rush job? Yes or No
Request Date	date the work order was entered into the system
Wok Date	date the work was completed
technician	number of technicians required
Labour_warranty	is labour under warranty? Yes or No
Parts_warranty	are parts under warranty? Yes or No
Labour_hour	for completed work orders - number of hours of labour
Parts Cost	cost of parts required to complete the work
Payment	type of payment customer will use - Account, C.O.D, Credit, P.O., Warranty
Revenue	Revenue generated from trade

Analysis Requirements

Create measures and calculated columns as described below:

Wait: calculated column of duration between Request date and Work Date in days
Labour cost: calculated column of labour rate per labour hour
Labour fee: Measure of total labour cost, if not under warranty
Parts fee: Measure of total parts cost, if not under warranty

© TECHIOTA LLP. All rights reserved

Total Cost: Calculated column of labour cost + Parts Cost
Total Fee: Measure of labour fee +Parts Fee
Month: Month and Year of Requested Date
Request Day: 3-letter weekday name, based on Request Date
Work Day: 3-letter weekday name, based on Work Date
P/L: Profit or Loss based on total revenue - total cost

Analysis Requirements

KPI

1. Total number of work orders processed.
2. Average wait in days
3. Rush job percentage
4. Total revenue

Analysis

1. Number of work orders by type (Assess, Deliver, etc.).
2. Number of works done by district.
3. Revenue generated by each district (Top 10)
4. Count of technicians by number of technicians needed to work.
5. Average number of technicians required per service type.
6. Trend of number of works done over time.
7. Percentage of jobs under labour or parts warranty.
8. Average labour hours.
9. Average cost of parts per service type.
10. Customer preferences for payment methods.
11. Revenue generated by payment type.
12. Total cost by services
